

PROJECT FACTS

DAVIS APPLIED TECHNOLOGY COLLEGE

New Construction

63,000 square feet

10 classrooms

1 laboratory

Piretti, Breathe and Navigator Seating

Custom Wood Desking and Casegoods

UINTAH BASIN APPLIED TECHNOLOGY COLLEGE

New Construction

91,000 square feet

15 classrooms

1 career & testing center

1 common's area

34 offices

1 board room

1 conference room

Piretti 2000, Ithaca, Navigator and Revelation Seating

Develop Table Components

Custom Wood Desking and Casegoods

Uinta Basin College

UCI - Working to Make a Difference

When the Davis Applied Technology College began work on its newly constructed Barlow Building, Utah Correctional Industries hadn't supplied the college with a single piece of furniture, but by the time the building opened in April of 2009, much of its 63,000 square feet contained product designed, manufactured, and installed by UCI.

A new home for some of its most highly demanded technical programs, the Barlow Building contains modern classroom and laboratory spaces that mimic industry environments. While the building may be a state-of-the-art training facility, UCI approached the project with the same traditional business values that have been building its relationship with DATC from the beginning.

Starting with the design process, UCI views every project as a collaboration with the customer. "Other vendors have tried to tell us what we want, but UCI gives us what we tell them we want," says DATC Facilities Director, Kent Thorsted.

Joint revisions of detailed layout and bid documents prior to production ensure that UCI meets both their customers' expectations and their furniture needs. After the sale, installation services and ongoing product support continue the collaboration for the life of the furniture.

In addition to traditional customer service and life-cycle support, UCI is able to provide old-fashioned quality and value. "Going with the products from

UCI we were able to stretch our budget, saving taxpayer money," says Kent Thorsted.

News like that really gets around, which led to UCI being contracted by the Uintah Basin Applied Technology College to furnish their new Vernal Extension Campus Building only three months later. "We wanted durable chairs that would withstand the daily use of high school and adult students, but at the same time we wanted them to be nice looking and comfortable," says Executive Assistant to the President, Trenna Ballou. The products they selected, including the Piretti 2000, Navigator, and Ithaca Ultra mid-back and high-back seating, fit the bill. They also coordinate with the seating at the other Uintah Basin buildings making them more versatile in reconfigurations.

In addition to the seating, UCI supplied wood casegoods and desks for both the Uintah Basin and Davis buildings. When the product offering catalog failed to meet all of the colleges needs, UCI designed and built custom furniture. "We were looking for light wood custom made desks and bookshelves that were very functional. We selected the products we did because they fulfilled all our expectations," says Trenna Ballou.

With all that old-fashioned attention to detail and customer satisfaction, you might think modern design is beyond the reach of Utah Correctional Industries, but according to their customers you'd be wrong.

"I HAVE HAD NOTHING BUT GREAT COMMENTS FROM OUR FACULTY AND STAFF ON THE PRODUCTS THAT UCI PROVIDED. THEY MET EVERY EXPECTATION."
