RE: Villa Module with USB

Villa modules now consist of two simplex power receptacles and two USB charging ports, along with one opening for a customer supplied data jack.

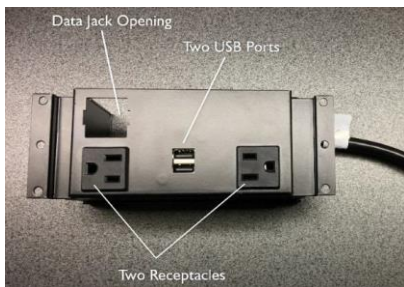

Villa is a surface module that mounts below a 6-1/4" X 3" grommet cutout. Receptacles are accessible when grommet cover (optional) is in the open position. Villa is available with a 3-prong cord with a 36", 108" or 180" length, or is available with a 14" Activ8 connection cord. Snap-in data adaptor brackets are supplied to hold the most common data jacks.

As a result of the change to the Villa modules, model numbers of the 3-prong power cord have changed and can be found in the chart below.

Old Model Number	New Model Number
14.3260.36.BL	14.3263.36.BL
14.3260.108.BL	14.3263.108.BL
14.3260.180.BL	14.3263.180.BL

The model numbers for the Activ8 version of Villa, AC8VMC.XX and AC8VMN.BL, will remain the same.

Please note that due to the addition of the two USB charging ports on all Villa modules, the prices have increased.

Thank you,
